PROJECT-1: Data Analytics Process
Application in Real Life Scenario Case Study

Making an Art Drawing

1. PLAN - We first decide the theme of the drawing. Is it nature, festival-oriented, character-drawing, etc.

2. PREPARE - Next we check if we have the necessary tools(like drawing paper or canvas, water/canvas colours, brushes, crayons, markers, etc.) and is it enough to finish the drawing. If not then buy those things.

3. PROCESS - You start searching for inspirations from internet, books, magazines, collections, etc. and collect images that suit the theme you chose.

4. ANALYZE - Now you start observing or analysing colour theory(i.e. colour combination, shades, etc.), view(landscape, portrait, etc).

5. SHARE - You share your ideas with your friends or mentors to sort os get a feedback.

6. ACT - Now you finally start drawing.

(PS- I chose this example as drawing is one of my hobbies and I find myself doing this every time I start drawing something new.)
